DETAILED ACTION

Allowable Subject Matter

1. Claims 1-17 allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: Regarding claims 1,9 and 10 the most relevant prior art of record Gunmar et al teaches a communication performance calculation method in a mobile communication system which includes a plurality of base stations and a plurality of mobile stations for carrying out communication with the base stations, wherein an area where the mobile stations are distributed is divided into a plurality of subdivisions, said communication performance calculation method comprising: a transmission power data storing step of storing, for each of the plurality subdivisions transmission power data of a base station corresponding to the subdivision, of the mobile station visiting the subdivision, or of both a base station corresponding to the subdivision and mobile station visiting the subdivisions; a traffic intensity data storing step of storing for each of the plurality subdivisions traffic intensity data of the subdivision; a traffic calculating step of calculating a mean and variance of applied traffic at the base stations and a communication performance calculating step of calculating communication performance from the mean and variance. Claim 1,9 and 10 are allowable over the prior art of record since the cited references taken individually or in combination (in view of Applicant Remarks/in the amendment) fails to teach (with combination above) a traffic calculating step of calculating a mean and variance of applied traffic at a single base station from transmission power data and the traffic intensity data of the plurality of subdivisions.
